

Introduction

This page and the following one, entitled "Using IndexedDB", will provide simple examples for creating, adding, removing, updating, and searching data in an IndexedDB database. They explain the basic steps to perform such common operations, while explaining the programming principles behind IndexedDB.

In the "Using IndexedDB" pages of this course, you will learn about:

- Creating and populating a database
- Working with data
- Using transactions
- Inserting, deleting, updating and getting data
- Creating and populating a database
