

Here is the discussion forum for this part of the course. Please either post your comments/observations/questions or share your creations.

Let us suggest some topics of discussion and optional projects:

SUGGESTED TOPIC

- Did you know that it was possible to get some control when we drag a file out of a page, and drop it to the desktop (for example)?

OPTIONAL PROJECTS

- If you drag and drop the same file several times to a drop zone, this can be confusing. Try to modify some of the examples for avoiding duplication (ex: uploading twice the same file).
- Try to modify the example that played a song loaded in memory, using Web Audio, for allowing a song file to be dragged and dropped.
